Heated Jackets

Electrical Heating Jacket
20730

For transmission studies of liquids or solids up to 250 °C the Electrical Heating Jacket, used with a range of liquid or solid sample holders - is ideal.

Water Heating Jacket
20710

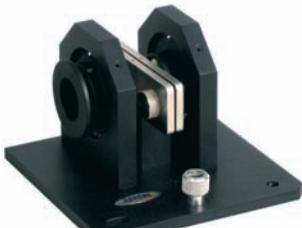

The Water Heating Jacket is similar to the Electrical Heating Jacket, but it uses circulating water to heat the sample cell. A jacket around the circular aperture is filled with a solution, for example water, heated by a thermocirculating system.

IR Polarizers and Wire Grids

Wire Grids

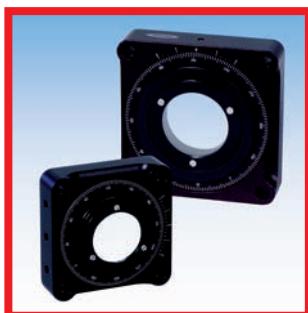

Free Standing Wire Grids

57200 -57135

Extremely efficient polarizers can be made, for the mid-IR to millimeter wavelengths using free standing wire grids (unsupported wires). The only requirement is that the wavelength is much greater than the wire spacing.

Rotators

Rotators

57340 57350 57360 57370

These precision rotators are designed for mounting substrate polarizers. They feature dual thrust roller bearing construction for stiffness and positive feel. Graduated in 2 degree intervals these rotators can either be post or bench mounted.

Polarizers

Holographic Polarizers

12000 - 12951

Holographic polarizers are much more efficient than ruled gratings because of the much shorter periods and extreme uniformity across the surface of the substrate – light scatter associated with gratings is eliminated.

Holographic Polarizer in an Optical Mount

57010 - 57097

Holographic polarizers are much more efficient than ruled gratings because of the much shorter periods and extreme uniformity across the surface of the substrate – light scatter associated with gratings is eliminated.

Economy Polarizers

57010 - 57097

these polarizers are offered from stock on BaF₂, CaF₂, KRS-5, and ZnSe substrates, in standard 25 or 50 mm support rings. They are manufactured at 2500 lines/mm, to provide acceptable polarization performance at an economical price.
